

August 21, 2012

Robert C. Wilson III, President
The John M. O'Quinn Foundation
P.O. Box 27501
Houston, Texas 77227

Dear Mr. Wilson:

The Friends of Brazoria Wildlife Refuge Complex was formed in 1994 with a mission to promote, support, and assist the Texas Mid-Coast National Wildlife Refuge Complex in the operation and development of its refuge programs. To that end, and through this proposal, we request \$424,280 to acquire 212.7 acres in the Columbia Bottomlands Ecosystem - the only expanse of hardwood forested wetlands in Texas adjacent to the Gulf of Mexico. Acquiring this acreage, the "Texas Red Oak Tract," serves a larger purpose: conserving the internationally-significant Columbia Bottomlands Ecosystem, found nowhere else in the United States. The land helps preserve quality of life for coastal communities while providing open space, recreation, and environmental education in a fast-growing region of Texas.

The project supports the ultimate goal of acquiring and protecting 70,000 acres of this old-growth bottomland forest in the floodplains of the Brazos, San Bernard, and Colorado rivers near the Gulf of Mexico. The Texas Red Oak Tract will add 212.7 acres to the 24,000 acquired to date, tying existing conservation areas into a corridor of prime waterfowl and forest songbird habitat. Also, the conservation of such priority tracts will protect the San Bernard River watershed, which provides fresh water to the Refuge's estuarine marshes. These estuaries are essential for conserving the coast's biological resources, including fish and shrimp, which support commerce and recreation.

The Columbia Bottomlands Ecosystem has high wildlife and wetland values, and the wetland types protected under this project are among the most productive for waterfowl and wildlife in the United States. A great diversity of birds, mammals, fish, reptiles, and amphibians rely on these wetlands for all or part of their life cycles. Millions of Nearctic-Neotropical songbirds make landfall in the Bottomlands during spring migration and also use the area during fall migration. Migrating birds depend on the forest tracts for rest and feeding after crossing the Gulf. Of the 650 species of birds known to occur in the United States, 320 species are found on the San Bernard National Wildlife Refuge - and most of them are likely to spend part of their life cycles on the Texas Red Oak Tract.

A \$424,280 grant from the John M. O'Quinn Foundation will fund pre-acquisition due diligence activities (e.g., survey, environmental assessments and reporting, closing costs) as well as the actual purchase of the Texas Red Oak Tract. Ultimately, The U.S. Fish and Wildlife Service will protect and preserve the tract, in perpetuity, as part of the National Wildlife Refuge System.

In the next pages, we present detailed information that describes the value of this project. Should you require additional information, please contact me at (979) 297-1815, Michael Lange, U.S. Fish and Wildlife Service at (979) 964-4011, or Tom Smith, National Fish and Wildlife Foundation, at (505) 292-2143. You might also consider discussing the project and Mr. O'Quinn's support for our conservation efforts with David Towery. Thank you for considering this request.

Sincerely,

Ed Barrios
President, Friends of Brazoria Wildlife Refuges

History of Organization

Friends of Brazoria Wildlife Refuges (“Friends,” “Friends Group”) is a 501(c)(3) non-profit organization governed by a thirteen-member, volunteer board composed of persons who represent those interested in conservation, education, and the natural environment. Our founders created the Friends Group to promote public appreciation of the wildlife resources of the Refuge, which is contained within 100,000 acres of unique coastal habitat. The Refuge, its facilities, and its programs are located in southern Brazoria County, within 50 to 70 miles from Houston. This is the Houston area’s closest National Wildlife Refuge (NWR) that contains coastal marshes, prairies, and forested wetlands; 37% of program participants reside in the Houston metropolitan area. The Friends believe that public education, refuge improvements, and volunteer efforts are critical to conserving a unique habitat. Accordingly, improving public access and facilities at the Refuges is a major part of our mission. To that end, the Friends obtain resources for Refuge facilities, programs, and materials; recruit volunteers; and participate in habitat improvement, natural history experiences, community outreach education programs, environmental education programs, fund-raising, and facility improvements.

To date, the Friends Group has contributed significantly to the Texas Mid-Coast NWR, not only by donating thousands of volunteer hours but also by raising over \$1,500,000 for 40 projects and programs. Funding has supported the construction of trails, decks, boardwalks, benches, and observation platforms on the Refuges as well as annual public awareness and habitat education events: an annual Migration Celebration draws over 1,000 visitors, and Environmental Education programs for several local school districts reach 3,000 children a year. Funds also purchased equipment: an electronic gate at the Brazoria Refuge and equipment for the Environmental Education programs. Volunteers have donated countless hours to bird banding, clean-up at the refuges, invasive plant species control, and hosting visitors at the Discovery Center, Auto Tour Loop, and Migration Celebration. In 2011, the Friends Group obtained a \$300,000 grant from Houston Endowment for pre-acquisition funds to facilitate the purchase of ten tracts in the Columbia Bottomlands Ecosystem.

Description of Need: Problem the Project Will Address

At stake is the integrity of the nationally- and internationally-significant Columbia Bottomlands Ecosystem. In addition to the unique bottomland forest adjacent to the Gulf of Mexico, this floodplain Ecosystem contains a variety of environmentally-significant wetland habitats: rivers, bayous, sloughs, marshes, ponds, lakes, and native prairie. The Ecosystem habitat has high wildlife and wetland values; it is especially important for Nearctic-Neotropical migratory birds because of its location near the Gulf. Migrating birds depend on the Ecosystem that still remains to rest and feed after crossing the Gulf. Nearctic-Neotropical species and resident birds breed in this Ecosystem, and numerous species winter there. In addition, many species of waterfowl winter in the Bottomlands, while wood ducks, mottled ducks, and black-bellied whistling ducks also breed in the Ecosystem. The Columbia Bottomlands Task Force found that 237 species of birds, totaling at least 29 million individuals, migrate through the Ecosystem every year. Using Doppler radar, Dr. Sidney Gauthreaux, Jr. has documented that the Columbia Bottomlands is a major stopover area for these migrants. Gauthreaux’s studies found that the number of flights detected by the Lake Charles radar during a 20-year time span had declined by almost 50 percent.

Originally, this bottomland hardwood forest covered 700,000 acres and over 1,000 square miles. Clearing for grazing and agriculture, commercial and residential development, drainage, and logging decimate the Ecosystem habitat by thousands of acres each year. The Bottomlands adjoin the greater Houston area, which expands even through economic downturns. Economic pressures threaten the forested wetlands and other habitats of the Bottomlands as landowners search for ways to pay their mortgages and provide a return on investment. The Bottomlands is increasingly fragmented as Houston and local municipalities expand and Houston’s levee districts clear and remove thousands of acres from the floodplain for development. The Columbia Bottomlands Task Force estimates that only 150,000 acres remain - less than one-quarter of the original forest. Once destroyed, old growth forest will take generations to replace, and the impact on wintering and nesting habitat will be unrecoverable. Failing to conserve and protect land in the Columbia Bottomlands now will result in severe population decline among Nearctic-Neotropical migrants and wintering waterfowl. Acquiring the Texas Red Oak Tract and placing it in the

Refuge system will prevent losing over 200 acres of critical habitat to development.

The quantity of land currently in conservation is not adequate to protect either the Ecosystem or dependent wildlife species. Although the economic recession has had a comparatively minor impact on the Houston area, the recession has produced many more rural landowners who need to sell their land - and who now consider selling it for conservation. Willing sellers exist, but the lack of funding slows acquisitions, during which time development either destroys or encroaches on key habitat. The speed of habitat loss undermines conservation efforts, which will not advance unless adequate funding is found soon. A \$424,280 grant from the O'Quinn Foundation to secure the Texas Red Oak Tract will not only increase the number of acres conserved directly but also support conservation goals while habitat is still available.

Compounding the benefits of habitat preservation, the acquisition of the Texas Red Oak Tract will provide added public benefits, in the form of compatible recreational uses, educational opportunities, and to further research. Other public benefits include providing green space, improving air quality, storing excess runoff and river overflow, buffering the impact from hurricanes, reducing noise pollution, conserving biodiversity and wildlife, capturing carbon dioxide (reducing green house gases), and generally maintaining the quality of life for the area residents. Regarding public access, demand for outdoor recreation is high in the greater Houston metropolitan area, and the US. Fish and Wildlife Service can offer wildlife observation and interpretation on the proposed tract. Residents of Houston, Pearland, Bay City, Wharton, Sargent, Sugar Land, Needville, Richmond, Rosenberg, Lake Jackson, Angleton, Richwood, Brazoria, and Freeport will benefit directly from the conservation of the tract preserved under this proposal.

Intended use of the Grant: Project Purpose and Description

This project is a collaborative effort of the Friends Group, the National Fish and Wildlife Foundation (NFWF), the U.S. Fish and Wildlife Service (USFWS), and a private landowner partnership in Brazoria County. Through this proposal, the collaborators will acquire and protect over 200 acres of old-growth, high-quality, bottomland hardwood forest and forested wetlands. The property has been used for recreation, livestock grazing, and hunting, with potential future sale for development – all of which destroy habitat in the area's unique, threatened, and shrinking ecosystem.

The project's overall goal is to protect - permanently, through fee title acquisition - this bottomland hardwood forest and forested wetlands habitat that is important for the conservation of the Columbia Bottomlands Ecosystem. The project's specific objective is to acquire and conserve 212.7 acres that are adjacent to other tracts - particularly, the Dance Bayou Tract, 657 acres donated to USFWS by Mr. O'Quinn in April of 1997 - that are already part of the San Bernard National Wildlife Refuge System. Like the Dance Bayou Tract, the targeted tract features the Texas red oak, a species that appears on no other USFWS acres preserved to date within the Ecosystem. The Texas Red Oak Tract contains all age classes of the species, from old, mature trees estimated at between 150 and 200 years old to young saplings. Acquiring the Texas Red Oak Tract will not only enhance Mr. O'Quinn's prior contribution to environmental initiatives but also perpetuate his legacy of preserving threatened, critical habitat.

Pre-acquisition activities are the first step to purchasing and preserving acreage in the Columbia Bottomlands. In the pre-acquisition stage, the Texas Mid-Coast National Wildlife Refuge Complex (USFWS) and NFWF negotiate with landowners and conduct due diligence required to secure clear title. The USFWS Region 2 Realty Division undertakes pre-acquisition activities under the coordination of Michael Lange. Mr. Lange performs biological ascertainties, site inspections, and environmental assessments on each tract scheduled for acquisition. He draws upon a long-standing, highly-effective collaboration with NFWF, which provides land consulting services through Thomas E. Smith. Mr. Smith negotiates with landowners and obtains documents required to finalize purchases. Lange and Smith perform their functions in the field in Brazoria County. Assisting is Elizabeth Epstein, NFWF Account Manager, who provides support from NFWF offices in San Francisco. Pre-acquisition activities are:

- Contract appraisals
- Conduct biological ascertainment inspections
- Obtain title reports
- Complete "yellow book" appraisals and value approvals

- Perform site inspections
- Conduct environmental site assessments
- Obtain updated land surveys
- Order title policies
- Complete any necessary title curatives
- Prepare just compensation statements
- Submit written offers to landowner (with purchase agreement)
- Establish escrow closings

Already, NFWF has negotiated with the landowner partnership - willing sellers who contacted USFWS to initiate the sale process – and reached an agreement on the purchase price. USFWS has contracted the appraisal, obtained the title report, completed “yellow book” appraisals and value approvals, prepared a just compensation statement, performed an initial environmental assessment, and secured an updated title commitment from Great American Title Company. After covering the remaining pre-acquisition activities and title curative are finalized, the Friends Group will use grant funds to purchase the property from the landowner. The Friends Group will transfer the property directly to the USFWS to protect and preserve the tract, in perpetuity, as part of the National Wildlife Refuge System.

The project’s budget totals \$431,380, as follows:

Texas Red Oak Tract – Pre-Acquisition & Acquisition	
Item	Amount
Title Search	\$1,000 *
Survey	\$28,000
Appraisal	\$6,000 *
Tax Certificates	\$100 *
Land Consultant Fee	\$9,000
Recording Fee	\$180
Delivery Fees	\$100
Title Insurance & Title Policy	\$5,000
Escrow Fee	\$500
Legal Fees (for title curative)	\$5,000
Environmental Reports	\$4,500
Fee title	\$372,000 (\$1,750/acre x 212.657 acres)
Total Project Budget	\$431,380
* Amount Obtained to Date (Friends Group)	\$7,100
Amount Remaining	\$424,280

Amount of Money Needed

The Friends Group needs \$424,280 from The John M. O’Quinn Foundation to complete the acquisition.

Challenge or Matching Grant

There is no challenge or matching grant relating to this grant.

Previous Funding from The John M. O’Quinn Foundation

Because The Friends Group has not submitted any prior proposals to The John M. O’Quinn Foundation, our organization has never received funding from the Foundation. However, Mr. O’Quinn has made significant contributions to the Columbia Bottomlands project. In 1997, Mr. O’Quinn purchased 657 acres in the Bottomlands, for \$361,000, and donated that tract (the Dance Bayou Tract) directly to the USFWS. On January 12, 2001, the USFWS acquired the McNeill Tract from the Trust for Public Land (TPL); TPL was the recipient of another donation from The John M. O’Quinn Foundation, in the amount of \$100,000, for the McNeill Tract. Encompassing 1,276 acres, the McNeill Tract includes “The Big Tree,” the largest Live Oak recorded in the State of Texas. The John M. O’Quinn Foundation followed with another gift to TPL, this one for \$150,000, toward acquiring the Brazos River Unit, a beautiful old-growth tract totaling

731 acres across from Columbia Lakes on the Brazos River. TPL transferred the Brazos River Unit to the USFWS on December 17, 2004.

With the Dance Bayou Tract donation, Mr. O'Quinn initiated the Columbia Bottomlands project by acquiring the first bottomlands hardwood forest tract and donating it to the USFWS. He not only became the Columbia Bottomlands project's first private donor but also initiated all subsequent efforts to preserve habitat through public and private partnerships.

Listing of Sources of Financial and/or In-kind Support for the Project

As indicated in the project budget, above, the Friends Group has paid \$7,100 of pre-acquisition costs. This proposal to the John M. O'Quinn Foundation is our first solicitation of grant support for the Texas Red Oak Tract. Therefore, we have no other sources of support at this time. We have made this our first request for one primary reason: Mr. O'Quinn donated 657 acres adjacent to this tract in 1997. Unlike other potential donors, the John M. O'Quinn Foundation has a unique - and literal - connection to the Texas Red Oak Tract by virtue of his prior contribution. His three donations to the Columbia Bottomlands project for habitat conservation suggest a unique opportunity to expand his gift through a partnership on the proposed project. Mr. O'Quinn's history prompted The Friends to send our initial request for support for the Texas Red Oak Tract from his Foundation.

We have discussed this proposal to the John M. O'Quinn Foundation with Elizabeth Love, Grant Officer, of Houston Endowment. While Houston Endowment, by policy, does not submit letters of support, Ms. Love offered to discuss with you the benefits of this project. You may reach her at (713) 238-8132. In addition, we presented the project to David Towery, who expresses his support in a letter attached to this proposal.

Board Member Support

One hundred per cent of Board members have contributed financially to the Friends Group in the last fiscal year. In 2011, the Board members contributed over \$2,530 in personal cash donations. Board members also contributed 4,914 volunteer hours on Refuge projects during that period. At the USFWS rate of \$20.80 per hour, Board members' volunteer effort has a value of over \$102,000.

Dear Sir or Madam:

This is in response to your request of June 10, 2005, regarding your organization's tax-exempt status.

In May 1995 we issued a determination letter that recognized your organization as exempt from federal income tax. Our records indicate that your organization is currently exempt under section 501(c)(3) of the Internal Revenue Code.

Our records indicate that your organization is also classified as a public charity under sections 509(a)(1) and 170(b)(1)(A)(vi) of the Internal Revenue Code.

Our records indicate that contributions to your organization are deductible under section 170 of the Code, and that you are qualified to receive tax deductible bequests, devises, transfers or gifts under section 2055, 2106 or 2522 of the Internal Revenue Code.

If you have any questions, please call us at the telephone number shown in the heading of this letter.

Sincerely,

Janna K. Skufca, Director, TE/GE
